

The Specialist  
in Cancer Care

### PHYSICAL EXAMINATION

On admission: Mrs. Mrunalini S Deshpande, aged around 74-year-old, well built and nourished

**Height 144 cm; Weight: 74.7 BSA 1.72 m<sup>2</sup>**

**BP 117/78 mmHg, Pulse rate 64/min regular, SPO2 99% on room air**

No signs of pallor, icterus, cyanosis, clubbing or edema

CVS: Clinically NAD

RS: Right thoracotomy scar+, healed well

PA: Soft, nontender

**INVESTIGATIONS:** CT SCAN CHEST PLAIN – RAMAIAH MEMORIAL HOSPITALS -19 11 2024- RIGHT MODERATE PLEURAL EFFUSION. FINDINGS ARE CONSISTENT WITH MULTIPLE PULMONARY METS.

30 11 2024- FDG PET SCAN -AZTER – S/P RIGHT MASTECTOMY ; NO LOCAL RECURRENCE. BILATERAL MILD PLEURAL EFFUSION; METABOLICALLY ACTIVE BILATERAL LUNG NODULES AND LYMPH NODES IN THE LEFT INT MAMMARY, LEFT SUPRACLAVICULAR, MEDIASTINUM AND PERIAORTIC REGIONS; METABOLIC ACTIVE SKELETAL LESIONS;

NON FDG AVID DIFFUSELY THICKENED NODULAR LEFT ADRENAL GLAND  
NO ABNORMAL METABOLIC ACTIVE LESIONS ELSEWHERE IN THE BODY .

**ON 25.03.2025: PET CT SCAN REPORT (HCG KR):** STATUS POST RIGHT MASTECTOMY, NO LOCAL RECURRENCE; INTERVAL RESOLUTION OF BILATMILD PLEURAL EFFUSIONS. INT REDUCTION IN SIZE AND INT RESOLUTION OF FDG UPTAKE IN MULTIPLE BILAT LUNG NODULES; INT REDUCTION IN SIZE AND INT RESOLUTION OF FDG UPTAKE IN LYMPH NODES IN LEFT INT MAMMARY, LEFT SCLN, MEDIASTINUM AND LEFT PARA AORTIC REGIONS; INTERVAL RESOLUTION OF FDG UPTAKE IN FEW SKELETAL LESIONS. NO ABNORMAL MET ACTIVE LESIONS ELSEWHERE IN THE BODY – SUGGESTIVE OF PARTIAL RESPONSE.

**13.09.2025: FDG PET/CT REPORT (ASTER):** STATUS POST RIGHT MODIFIED RADICAL MASTECTOMY. NO LOCAL RECURRENCE SEEN. TRACE RESIDUAL RIGHT PLEURAL EFFUSION. INTERVAL REDUCTION IN SIZE OF THE NON-FDG AND MULTIPLE BILATERAL LUNG NODULES. INTERVAL REDUCTION IN SIZE OF NON-FDG AVID LYMPH NODES IN LEFT INTERNAL MAMMARY, LEFT SUPRACLAVICULAR MEDIASTINUM AND LEFT PERIAORTIC REGIONS. STABLE NON-FDG AVID SKELETAL LESIONS AS DETAILED. NO ABNORMAL METABOLIC ACTIVE LESIONS ELSEWHERE IN THE BODY. OVERALL SCAN FINDINGS ARE SUGGESTIVE OF PARTIAL TREATMENT RESPONSE.

**31 03 2026- RAMAIAH MEMORIAL HOSPITAL – PET CT SCAN -IMPRESSION –** POST SURGICAL CHANGES OF RIGHT MASTECTOMY AND AXILLARY DISSECTION ; NO EVIDENCE OF LOCAL RECURRENCE IN RIGHT ANTEROLATERAL CHEST WALL. NO SIGNIFICANT HYPERMETABOLIC RIGHT AXILLARY LYMPH NODES; INTERVAL RESOLUTION OF NON FDG AVID LEFT INTERNAL MAMMARY AND MEDIASTINAL LYMPH NODES; NO SIG INTERVAL CHANGE IN SIZE AND NUMBER OF NON FDG AVID BILATERAL LUNG NODULES; INTERVAL RESOLUTION OF NON FDG AVID NECROTIC RETROPERITONEAL LYMPH NODE.
